

Studentnet Cloudwork V41 Release Notes: inTune, JAMF Connect and new Groups UI

Studentnet is pleased to advise that our latest version 41 is now available for release and deployment at schools.

V41 is a major release implementing full support for mobile device management and a new more flexible UI for managing Groups into AD and Azure AD.

Please find below the V41 release notes.

V41 New Features

- **Mobile device management:**
 - ✓ **inTune:** Added WS-Trust bindings to provide support for inTune
 - ✓ **JAMF Connect:** Added OpenID Connect bindings to provide support for JAMF Connect
- **Geo-Blocking:** Added Geo-Blocking and IP-address blocking controls
- **inTune authentication:** Added new sync profile settings to import UPN as an extra email address
- **New About box:** You can now find your Cloudwork version by selecting the Question Mark icon and then clicking About
- **New Groups UI:** Introduced a new User Interface for configuring groups during Account Provisioning
- **Improved Security:** Added a new security feature allowing explicit control of allowed IDP-Initiated logout redirect endpoints

V41 Improvements

- **Account Provisioning Schedules:** Now adjustable via the Cloudwork Admin Dashboard

- **Group Types:** Groups can now be assigned a type according to what they're used for
- **WS-Fed(inTune):** More config options to WS-Fed services
- **User Search:** Fixed a bug when searching for users in the Admin Dashboard
- **Events is Reports:** Added more event types to the Admin Report
- **Adobe Syncing:**
 - ✓ Fixed some syncing errors with Adobe
 - ✓ Added an option to Adobe syncing to handle disabled users
 - ✓ Added support for syncing multiple Adobe instances
- **TASS Parents:**
 - ✓ Added new options for family accounts and custom address blocks for TASS syncing
 - ✓ Better support for split family recognition in TASS syncing
- **Miscellaneous:** Other minor bugfixes and improvements
